SERVER SIDE RENDERING?

```javascript
import Document, { Head, Main, NextScript } from 'next/document'
import { ServerStyleSheet } from 'styled-components'

export default class MyDocument extends Document {
    static getInitialProps({ renderPage }) {
        const sheet = new ServerStyleSheet()
        const page = renderPage(App =>
            props =>
                sheet.collectStyles(<App { ...props} />
                )
            )
        const styleTags = sheet.getStyleElement()
        return { ...page, styleTags }
    }

    render() {
        return (
            <html>
                <Head>
                    <title>My page</title>
                    {this.props.styleTags}
                </Head>
                <body>
                    <Main />
                    <NextScript />
                </body>
            </html>
        )
    }
}
```
